

Every Healthcare Design Project Needs a CHID!

The Certified Healthcare Interior Designer® (CHID) credential is the industry's recognized indicator of excellence, commitment, and knowledge within acute, ambulatory, and residential care facility design.

LEARN MORE

WHAT IS A CHID?

A Certified Healthcare Interior Designer (CHID) is a design professional who has demonstrated specialized knowledge and expertise in the design of healthcare spaces. The CHID certification is awarded to those who meet rigorous industry standards including:

Extensive Knowledge of healthcare design principles, codes, and regulations.

Expertise in Patient-Centered Design, promoting healing environments and improving outcomes.

Experience with Infection Control and Safety, ensuring spaces are designed with health and safety protocols in mind.

Commitment to Sustainability and designing energy-efficient, environmentally responsible spaces.

**ENSURE YOUR NEXT PROJECT IS
DESIGNED FOR SUCCESS BY
ENGAGING A CHID!**

WHY CHOOSE A CHID?

Patient-Centered Design

A CHID ensures that the design promotes an optimal patient experience by focusing on safety, accessibility, and ease of navigation.

Compliance with Health Standards

CHIDs have in-depth knowledge of the latest healthcare-specific codes and standards minimizing the risk of costly errors or delays.

Improved Outcomes

CHIDs create spaces that support staff productivity and well-being, which in turn improves patient care.

Cost-Effective Design Solutions

CHIDs are skilled at maximizing space efficiency and ensuring cost-effective solutions that don't compromise safety, aesthetics, or functionality.

Expert Project Leadership

A CHID brings valuable experience to the table, managing the unique challenges of healthcare projects, including infection control, site logistics, and coordination with medical teams.
